

Poso Creek Integrated Regional Water Management (IRWM) Group Measurable Objectives

The ‘Measurable Objectives’ were developed by the IRWM Group as a means of accomplishing the Regional Goals, and used to identify projects and programs suitable for implementation to meet the priorities of the RWMG Participants, Stakeholders, and Interested Parties. Moreover, these Objectives were defined to directly support the DWR Statewide Priorities and Resource Management Strategies (RMSs) defined in the California Water Plan 2013 Update, that were deemed applicable to the Poso Creek region. Along with the Regional Goals defined in the *2014 IRWMP Update, Section 4.4*, the following Objectives, shown in the figure below, address the requirements of the California Water Code §10540.

A	Enhance reliability of surface water supplies delivered to region.	H	Enhance region-wide flood control measures.
B	Identify any significant threats to groundwater resources from overdrafting.	I	Promote environmental conservation and support wildlife habitat enhancement.
C	Improve regional water conveyance, direct recharge, and in-lieu service areas.	J	Identify drinking water quality issues of communities, water-related needs of DAC's, and consider improvements.
D	Increase absorptive capacity within the region.	K	Implement regional opportunities, projects, and programs.
E	Promote regional conjunctive water-use.	L	Implement region-wide water management actions.
F	Support groundwater monitoring activities.	M	Maintain compliance with State and Federal planning requirements.
G	Maintain and enhance quality of water supply.	N	Maintain coordination between Poso Creek RWMG Participants and Interested Parties.

The development of these Measurable Objectives, including the quantitative and qualitative measurement metrics used to assess these Objectives are explained in in the *2014 IRWMP Update, Section 4.5*. The assessment of conformance of these Objectives to the DWR Statewide Priorities and RMSs is given in the *2014 IRWMP Update, Sections 4.7 and 4.8*, respectively. As described above, the IRWM Group has used these Objectives as a means of connecting the Regional Goals to the Statewide Priorities, RMSs, and other strategies, thereby establishing the Measurable Objectives as a DWR- and IRWM Group-compliant list used to assess projects and programs. This planning structure, complementary to the aforementioned planning hierarchy, is shown in the following figure.

The IRWM Group Planning Structure.
